Fixed Resistors (Surface Mount Resistors) INDEX

Classification	Product item	Part No.	Page
Safety and Legal Matters to Be Observed / Matters to Be Observed When Using This Product			1
General purpose chip resistors	Thick film chip resistors	ERJ XG, 1G, 2G, 3G, 6G, ERJ 8G*, 14*, 12*, 12Z*, 1T*	5
	Precision thick film chip resistors	ERJ XG, 1G, 1R, 2R, 3R, 6R, 3E, 6E, 8E*, ERJ 14*, 12*, 1T*	8
High precision	Thin film chip resistors, High voltage type	ERA 8P	12
	Thin film chip resistors, High stability and reliability type	ERA 2V, 3V, 3K, 6V, 6K, 8V, 8K	14
	Metal film (Thin film) Chip resistors, High reliability type	ERA 1A, 2A, 3A, 6A, 8A	17
	High precision thick film chip resistors	ERJ PB3, PB6	20
Current sensing	Thick film chip resistors / Low resistance type	ERJ 2LW, 3LW, 6LW, ERJ 2BW, 3BW, 6BW, 8BW, 6CW, 8CW ERJ 2B, 3B, 6D, 6B, 8B, 14B, 3R, 6R, 8R, 14R, ERJ 12R, 12Z, ERJ 1TR, L03, L06, L08, L14, L12, L1D	22
	Current sensing resistors, Metal plate type	ERJ MS4S, MS4H, MB1S	28
	High power chip resistors / Wide terminal type	ERJ A1, B1, B2, B3	32
	Low TCR high power chip resistors / Wide terminal type	ERJ D1, D2	37
Small & High power	Anti-Surge thick film chip resistors	ERJ PA2, P03, PA3, P06, P08, PM8, P14	40
	Anti-Surge thick film chip resistors (Double-sided resistive elements structure)	ERJ P6W*	45
	Anti-Pulse thick film chip resistors	ERJ T06, T08, T14	47
Anti-Sulfurated	Anti-Sulfurated thick film chip resistors	ERJ S02, S03, S06, S08, S14, S12, S1D, S1T, ERJ U0X, U01, U02, U03, U06, U08, U14, U12, ERJ U1D, ERJ U1T, ERJ U6S, U6Q	50
	Anti-Sulfurated thick film chip resistors / Precision type	ERJ U2R, U3R, U6R	54
	Anti-Sulfurated thick film chip resistors / Anti-Surge type	ERJ UP3, UP6, UP8	56
	Anti-Sulfurated thick film chip resistors / Wide terminal type	ERJ C1	59
High temperature	High temperature thick film chip resistors (Automotive Grade)	ERJ H2G, H2C, H2R, H3G, H3E, H3Q, H6G, HP6	62
Resistor network/Array	Chip resistor array	EXB 14V, 18V, 24V, 28V, N8V, 2HV, 34V, V4V, 38V, V8V, S8V	65
	Anti-Sulfurated chip resistor array	EXB U14, U18, U24, U28, U2H, U34, U38	69
	Chip resistor networks	EXB D, E, A, Q	72
	Chip attenuator	EXB 14AT, 24AT	76
Common specifications	Packaging methods (Taping)		78
	Recommended land pattern		83
	Recommended soldering conditions		86
	Standard for resistance value and resistance tolerance		87

*Not Recommended for New Design

Safety and Legal Matters to Be Observed

Product specifications and applications

- Please be advised that this product and product specifications are subject to change without notice for improvement purposes. Therefore, please request and confirm the latest delivery specifications that explain the specifications in detail before the final design, or purchase or use of the product, regardless of the application. In addition, do not use this product in any way that deviates from the contents of the company's delivery specifications.
- Unless otherwise specified in this catalog or the delivery specifications, this product is intended for use in general electronic equipment (AV products, home appliances, commercial equipment, office equipment, information and communication equipment, etc.).
When this product is used for the following special cases, please separately discuss the delivery specifications suited to each application with the company. These include applications requiring special quality and reliability, wherein their failures or malfunctions may directly threaten human life or cause harm to the human body (e.g.: space/aircraft equipment, transportation/traffic equipment, combustion equipment, medical equipment, disaster prevention/crime prevention equipment, safety equipment, etc.).

Safety design and product evaluation

- Please ensure safety through protection circuits, redundant circuits, etc., in the customer's system design so that a defect in our company's product will not endanger human life or cause other serious damage.
- This catalog shows the quality and performance of individual parts. The durability of parts varies depending on the usage environment and conditions. Therefore, please ensure to evaluate and confirm the state of each part after it has been mounted in your product in the actual operating environment before use.
If you have any doubts about the safety of this product, then please notify us immediately, and be sure to conduct a technical review including the above protection circuits and redundant circuits at your company.

Laws / Regulations / Intellectual property

- The transportation of dangerous goods as designated by UN numbers, UN classifications, etc., does not apply to this product. In addition, when exporting products, product specifications, and technical information described in this catalog, please comply with the laws and regulations of the countries to which the products are exported, especially those concerning security export control.
- Each model of this product complies with the RoHS Directive (Restriction of the use of hazardous substances in electrical and electronic equipment) (2011/65/EU and (EU) 2015/863). The date of compliance with the RoHS Directive and REACH Regulation varies depending on the product model.
Further, if you are using product models in stock and are not sure whether or not they comply with the RoHS Directive or REACH Regulation, please contact us by selecting "Sales Inquiry" from the inquiry form.
- During the manufacturing process of this product and any of its components and materials to be used, Panasonic does not intentionally use ozone-depleting substances stipulated in the Montreal Protocol and specific bromine-based flame retardants such as PBBs (Poly-Brominated Biphenyls) / PBDEs (Poly-Brominated Diphenyl Ethers). In addition, the materials used in this product are all listed as existing chemical substances based on the Act on the Regulation of Manufacture and Evaluation of Chemical Substances.
- With regard to the disposal of this product, please confirm the disposal method in each country and region where it is incorporated into your company's product and used.
- The technical information contained in this catalog is intended to show only typical operation and application circuit examples of this product. This catalog does not guarantee that such information does not infringe upon the intellectual property rights of Panasonic or any third party, nor imply that the license of such rights has been granted.

Panasonic Industry will assume no liability whatsoever if the use of our company's products deviates from the contents of this catalog or does not comply with the precautions. Please be advised of these restrictions.

Matters to Be Observed When Using This Product

(Fixed resistor)

Use environments and cleaning conditions

- This product (fixed resistor) is not designed for use in specific environments. Using the resistor in the following specific environments or service conditions may affect the performance/reliability of the resistor. Avoid using it in such specific environments. If you intend to use the resistor in such environments, checking the performance, reliability, etc., of the product sufficiently is your own responsibility.
 - (1) Used in liquid, such as water, oil, chemicals, and organic solvents.
 - (2) Used in a place exposed to direct sunlight, an outdoor place with no shielding, or a dusty place.
 - (3) Used in a place where the product is heavily exposed to sea breeze or a corrosive gas, such as Cl₂, H₂S, NH₃, SO₂, or NO_x.
 - (4) Used in an environment where static electricity and electromagnetic waves are strong.
 - (5) Located close to a heating component or a flammable material, such as a vinyl cable placed near the product.
 - (6) Sealed or coated with a resin.
 - (7) Solder flux of the resistor soldered with no-clean type solder, etc., is cleansed with a solvent, water, or a water-soluble cleaner, etc. (Water-soluble flux residues have a particularly large influence on a resistor.)
 - (8) Used in a place where dew concentrates on the product.
 - (9) Used in a contaminated state.
 - (Example: Touching the resistor mounted on a printed board leaving sebum on the resistor (improper handling))
- Sealing the resistor with a resin in a resin potting process, damp-proofing process, etc., applies excessive stress to the resistor, which may cause the internal electrodes a connection problem. In such cases, the proper operation of the resistor is not guaranteed. If you intend to use the resistor in such environments, checking the performance, reliability, etc., of the product sufficiently is your own responsibility.
- Do not leave the resistor immersed in a solvent for a long time. When using the resistor immersed in a solvent, confirm the operation of the product mounted on the board.
- When a cleaning solution or cleaning condition for cleaning the printed board or a drying condition for drying the printed board after soldering the resistor is improper, it may have a negative effect on the performance/reliability of the resistor. Confirming these conditions sufficiently is your own responsibility. Also examine the effects of soiled cleaning agent, cleaning residues, and post-cleaning contaminations, and control for these effects properly.

Response to anomalies and handling conditions

- When the resistor is heating abnormally or emitting a smell, stop using the resistor immediately, for example, turn off the main power supply of the device.
 - Also, keep your face and hands away from the product as it may become hot and cause burns.
- The resistor is so thin that it may break easily when subjected to impact. Before putting the resistor in use, confirm that the resistor has not been broken by impact that applied thereto when mounted on the printed board. Applying impact to the resistor or pinching the resistor with a hard tool (pliers, tweezers, etc.) may chip the resistor or its protective film, which affects its performance. Be careful to avoid such cases.
- Do not reuse a resistor having been used on a printed board and removed therefrom. Do not touch the resistor with your bare hands.
- Be careful not to drop the resistor on the floor, etc. The resistor is likely to suffer mechanical or electrical damage when dropped on the floor. Avoid using said resistor.
- The resistor may have its resistance value changed due to electrostatic discharge (ESD). Take ESD prevention measures when handling the resistor. ESD prevention measures include an environment where static electricity is not likely to be generated (recommended RH: 40% to 60%), by wearing an earth band, conductive gloves, etc., grounding the device in which the resistor is incorporated, and placing a conductive mat, etc., on a work platform.
- It is guaranteed that a resistor not exposed to any stress will have its proper resistance value. Any stress or pressure applied to the resistor may cause its resistance value to change. Examine and evaluate the characteristics of the resistor sufficiently before using it.

Reliability and product life

A capacitor conforming to "AEC-Q200" refers to a capacitor having passed some or all of evaluation test items defined in AEC-Q200.

To know the detailed specifications of each capacitor or specific evaluation test scores, please contact us.

We issue a delivery specification sheet for each product ordered. Please confirm the delivery specification sheet when you place an order with us.

Circuit design and circuit board design

- To prevent a case where a transient load (e.g., a pulse for a short period) too large for the product to handle is applied, make sure to evaluate and confirm the operation of the product incorporated in your product. Applying power or voltage (current) larger than the rated power or rated voltage (current) to the resistor may impair its performance and reliability. Make sure to use the resistor with power or voltage (current) equal to or lower than the rated power or rated voltage (current). The product warranty does not cover usage where an excessively large load, such as a pulse current, is applied to the product.
- The resistor may have a high temperature even when used with power equal to or lower than the rated power. Be careful in such cases. Another factor to be considered are effects on the board, peripheral components, etc., and the effects of peripheral components on the resistor. Make sure to confirm first that the temperature of the resistor incorporated in your product is equal to or lower than the specified temperature, and then use the resistor.
- When the resistors are connected in series or parallel, loads applied respectively to the resistors may not be equal to each other. Check whether the loads are equal in the actual circuit in which the resistors are incorporated.
- When a resistor is used in a high-frequency circuit, the resistor may fail to offer the required characteristics. Check whether the resistor offers the required characteristics in the actual circuit in which the resistors are incorporated.
- Be careful that unusual stress caused by an excessive bend of the printed board is not applied to the resistor. Design the circuit structure such that the resistor is not close to a perforated line for board splitting or on a line with sizable holes bored on the board.
- When a different component is mounted on the board where the resistor has been soldered, be careful that the board does not bend excessively. If necessary, provide the board with backup pins (support pins) to keep it straight.
- Avoid manual board splitting. Use a jig, etc., to break the board so that it does not bend excessively when split apart.

Mounting conditions

- When the product is used under mounting conditions departing from mounting conditions specified in our specification sheet, the product may be exposed to unexpected stress to fail. Be careful to avoid such a case. When mounting the resistor on a printed board, set the resistor's front and back surfaces in the direction indicated by the tape. Make sure to evaluate and confirm the operation of the resistor incorporated in your product and determine whether the resistor is usable as a component of the product.
- Set soldering conditions for the resistor within the recommended soldering conditions specified by our company. Any time, soldering condition departing from the specified soldering condition, such as a high peak temperature or a long heating may impair the performance/reliability of the resistor. Note that the specified soldering conditions indicate conditions under which degradation of the resistor characteristics does not occur but do not indicate conditions under which stable soldering can be performed. Check and set individual conditions under which stable soldering can be performed.
- Heat the resistor in advance so that a difference between the soldering temperature and the temperature of the resistor surface is reduced to 100 °C or lower. When dipping the soldered resistor in a solvent, etc., to cool the resistor rapidly, ensure that the temperature difference between the resistor and the solvent is 100 °C or lower during the dipping.
- When soldering the resistor using a soldering iron, apply hot air, etc., to the resistor to heat it sufficiently in advance and then solder the resistor without bringing the soldering iron tip into contact with the product. If the temperature of the soldering iron tip is high, finish the soldering work quickly (within 3 seconds when the temperature of the soldering iron tip is 350 °C or lower). In the case of a fixed resistor with low resistance, the resistor may fail to offer the exactly intended resistance value because of the variation in the solder volume, etc. Make sure to confirm the resistance value of the resistor in the actual circuit configuration.

- Soldering the resistor with too much solder or too little solder results in the poor reliability of the solder connection of the resistor. Use the proper volume of solder in the soldering process. Sufficiently check for the volume of solder used.
- Soldering with high bond strength or special property solder may affect the quality of the resistor. Do not use such solder.
- Use rosin-based solder flux. When using highly active solder flux made mainly of halogen (chlorine, bromine, etc.), flux residues may affect the performance and reliability of the resistor. Check the effects of flux residues before using the solder flux. Do not use highly acidic flux, water-soluble flux, or flux containing fluoride ions. When solder flux sticks to the resistor after the soldering process, the activation energy of the flux may corrode the resistor and cause it to fail. Prevent solder flux from sticking to the resistor.

Storage conditions

Keeping the product in the following environments or conditions may lead to degradation of its performance, solderability, etc. Do not keep the product in the following environments.

- (1) Stored in a place where the product is heavily exposed to sea breeze or a corrosive gas, such as Cl₂, H₂S, NH₃, SO₂, or NO_x.
- (2) Stored in a place where the product is exposed to direct sunlight.
- (3) Stored in a place where a temperature condition of 5 °C to 35 °C and a relative humidity condition of 45% to 85% cannot be maintained.
- (4) Kept in storage for more than one year from the delivery date (when the product is kept in conditions excluding any of the environments (1) to (3)).

Reference information

Guidelines

Before using the resistor, refer to the technical report issued by JEITA, EIAJ RCR-2121B "Safety Application Guide for Fixed Resistor for Use in Electronic Equipment" revised in February 2015.

Thick Film Chip Resistors

ERJ type

ERJ XG, 1G, 2G, 3G, 6G series

ERJ 8G, 14, 12, 12Z, 1T series

(Oct. 2021) Products marked as "NRFND" are not recommended for new design.
Target products : ERJ8G, 14, 12, 12Z, 1T series
Please refer to the recommended alternatives with "Design Support Tool" .

Features

- Small size and lightweight
- High reliability : Metal glaze thick film resistive element and three layers of electrodes
- Compatible with placement machines : Taping packaging available
- Suitable for both reflow and flow soldering
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant (except ERJXG, ERJ1GN)
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

- ERJXGN, 1GN, 1GJ, 2GE, 3GE, 6GE, 8GE, 14, 12, 12Z, 1T series, ±5 %

* Series XGN, 1GN, 1GJ and 2GE do not have value markings on the black side.

Please omit the letter "Y" from the part number for these series of parts.

The other part number factors will move up respectively.

* For the automotive application, please use ERJ1GJ as 0201 inch size from the new design.

Not recommended for new design

*1 : Use it on the condition that the case temperature is below the upper category temperature.

*2 : Rated continuous working voltage (RCWV) shall be determined from $RCWV = \sqrt{\text{Power rating} \times \text{Resistance value}}$, or limiting element voltage listed above, whichever less.

*3 : Overload test voltage (OTV) shall be determined from $OTV = \text{specified magnification (refer to performance)} \times RCWV$ or maximum overload voltage listed above, whichever less.

*4 : Please contact us when you need a type with a resistance of less than 10 Ω.

NRFND

Not recommended for new design

Power derating curve

For resistors operated in ambient temperatures above 70 °C, power rating shall be derated in accordance with the figure on the right.

Construction

Design and specifications are each subject to change without notice. Ask factory for the current technical specifications before purchase and/or use.

Should a safety concern arise regarding this product, please be sure to contact us immediately.

Thin Film Chip Resistors, High Voltage Type

ERA P type

ERA 8P series

Features

- High voltage : Achieves high limiting element voltage with original design concept (500V @1MΩ)
- High reliability : Stable at high temperature and humidity
(85 °C 85 %RH rated load, Category temperature range : -55 °C to +155 °C)
- High accuracy : Low resistance tolerance and temperature coefficient of resistance
- High performance : Low current noise, excellent linearity
- Anti-ESD : Original structure for high ESD performance
(AEC-Q200-002 HBM Guarantee at 4 kV)
- Anti-sulfurated : Original structure for sulfurated performance
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2133C
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

Ratings

Part No. (inch size)	Power rating at 85 °C ^{*1} (W)	Limiting element voltage ^{*2} (V)	Maximum overload voltage (V)	Part No. (detail)	Resistance tolerance (%)	T.C.R. (×10 ⁻⁶ /K)	Resistance range ^{*3} (Ω)	Category temperature range (°C)	AEC-Q200 Grade
ERA8P (1206)	0.25	500	1000	ERA8PEB ERA8PPB	±0.1	±25 ±15	160 k to 1 M (E24, E96)	-55 to +155	Grade 0

*1: Use it on the condition that the case temperature is below the upper category temperature.

*2: Rated continuous working voltage (RCWV) shall be determined from $RCWV = \sqrt{\text{Power Rating} \times \text{Resistance Values}}$, or limiting element voltage listed above, whichever less.

*3: E192 series resistance values are also available. The E192 series has custom part numbers. Please contact us for details.

Power derating curve

For resistors operated in ambient temperatures above 85°C, power rating shall be derated in accordance with the figure on the right.

Thin Film Chip Resistors, High Stability and Reliability Type

ERA V type

(High resistance value ERA K type)

ERA 2V, 3V, 6V, 8V series

(ERA 3K, 6K, 8K series)

Features

- High Power : To realize higher power rating, Limiting element voltage, and maximum overload voltage than current products
- High reliability : Stable at high temperature and humidity
(85 °C 85 %RH rated load, Category temperature range : -55 °C to +155 °C)
- High accuracy : Low resistance tolerance and temperature coefficient of resistance
- High performance : Low current noise, excellent linearity
- Anti-ESD : Original structure for high ESD performance
(AEC-Q200-002 HBM Class 1c and above)
- Anti-sulfurated : Original structure for sulfurated performance
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2133C
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Metal Film (Thin Film) Chip Resistors, High Reliability Type

ERA A type

ERA 1A, 2A, 3A, 6A, 8A series

Features

- High reliability : Stable at high temperature and humidity
(85 °C 85 %RH rated load, Category temperature range : -55 °C to +155 °C)
 - High accuracy : Low resistance tolerance and Temperature Coefficient of Resistance
 - High performance : Low current noise, excellent linearity
 - Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2133C
 - AEC-Q200 compliant (except ERA1A)
 - RoHS compliant
- As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

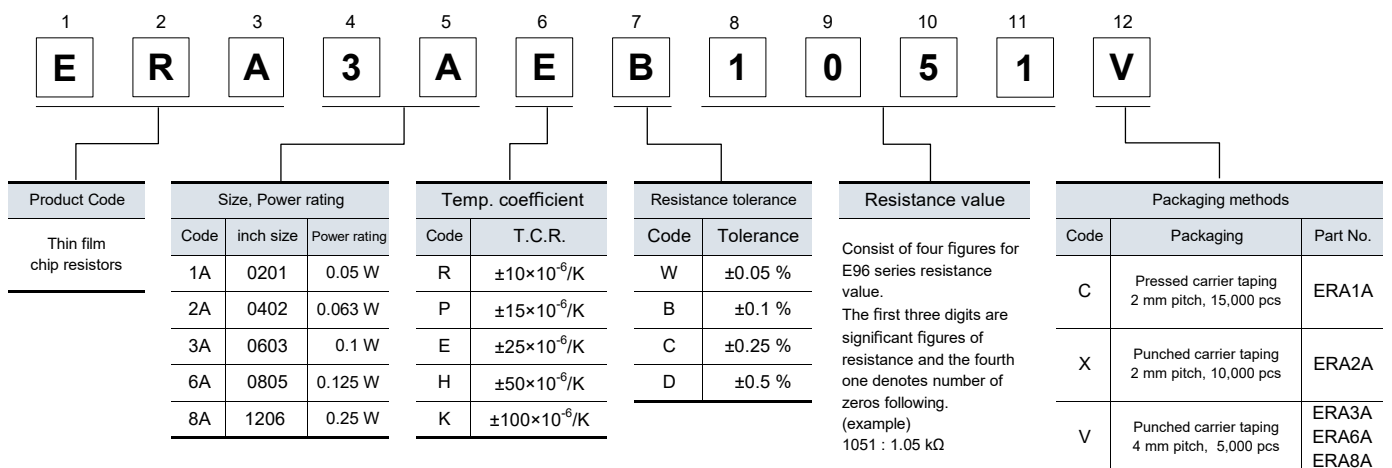

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

● E24 series

● E96 series and other Resistance values

Note : Duplicated resistance values as E24 series part numbers shall follow E24 part numbers.
(apply three digit resistance value)

High Precision Thick Film Chip Resistors

ERJ PB type

ERJ PB3, PB6 series

Features

- Achieve the resistance tolerance $\pm 0.1\%$ with high reliability metal glaze thick film resistor
- Guarantee the temperature coefficient of Resistance $\pm 50 \times 10^{-6}/K$ in high resistance range up to 1 M Ω
- High power : 0.20 W : 0603 inch /1608 mm size(ERJPB3)
: 0.25 W : 0805 inch /2012 mm size(ERJPB6)
- Reference Standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

Ratings

Part No. (inch size)	Power rating ^{*1} (70 °C)(W)	Limiting element voltage ^{*2} (V)	Maximum overload voltage ^{*3} (V)	Resistance tolerance (%)	Resistance range (Ω)	T.C.R. ($\times 10^{-6}/K$)	Category temperature range (°C)	AEC-Q200 Grade
ERJPB3 (0603)	0.20	150	200	± 0.1 ± 0.5	200 to 100 k (E24, E96)	± 50	-55 to +155	Grade 0
ERJPB6 (0805)	0.25	150	200	± 0.1 ± 0.5	200 to 1 M (E24, E96)	± 50		

*1: Use it on the condition that the case temperature is below the upper category temperature.

*2: Rated continuous working voltage (RCWV) shall be determined from $RCWV = \sqrt{\text{Power rating} \times \text{Resistance value}}$, or Limiting Element Voltage listed above, whichever less.

*3: Overload Test Voltage (OTV) shall be determined from $OTV = \text{Specified Magnification (refer to performance)} \times RCWV$ or Maximum overload voltage listed above, whichever less.

Power derating curve

For resistors operated in ambient temperatures above 70 °C, power rating shall be derated in accordance with the figure on the right.

Construction

Dimensions (not to scale)

Performance

Test Item	Performance requirements ΔR	Test conditions
Resistance	Within specified tolerance	20 °C
T. C. R.	Within specified T. C. R.	+25 °C / +125 °C
Overload	±0.5 %	Rated voltage× 2.0, 5 s
Resistance to soldering heat	±0.5 %	270 °C, 10 s
Rapid change of temperature	±0.5 %	-55 °C (30 min.) / +155 °C (30 min.), 100 cycles
High temperature exposure	±0.5 %	+155 °C, 1000 h
Damp heat, Steady state	±0.5 %	60 °C, 90 % to 95 %RH, 1000 h
Load life in humidity	±0.5 %	60 °C, 90 % to 95 %RH, Rated voltage, 1.5 h ON / 0.5 h OFF cycle, 1000 h
Endurance at 70 °C	±0.5 %	70 °C, Rated voltage , 1.5 h ON / 0.5 h OFF cycle, 1000 h

Thick Film Chip Resistors (Low Resistance Type)

ERJ type

ERJ 2LW, 3LW, 6LW series

ERJ 2BW, 3BW, 6BW, 8BW, 6CW, 8CW series

ERJ 2B, 3B, 6D, 6B, 8B, 14B series

ERJ 3R, 6R, 8R, 14R, 12R, 12Z, 1TR series

ERJ L03, L06, L08, L14, L12, L1D series

Features

- Current sensing resistor
- Small size and lightweight
- Realize both low-resistance & High-precision by original thick film resistive element & special electrode structure
- Suitable for both reflow and flow soldering
- Realize High-power by double-sided resistive elements structure that aimed to suppress temperature rising
: ERJ2LW, 3LW, 6LW, 2BW, 3BW, 6BW, 8BW, 6CW, 8CW
- Low TCR : $\pm 75 \times 10^{-6} / K$ (ERJ6CW, ERJ8CW)
- Low resistance value : Thick film resistors available from 5 mΩ (ERJ3LW, 6LW)
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2144
- AEC-Q200 compliant
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Current Sensing Resistors, Metal Plate Type

ERJ MS, MB type

ERJ MS4, MB1 series

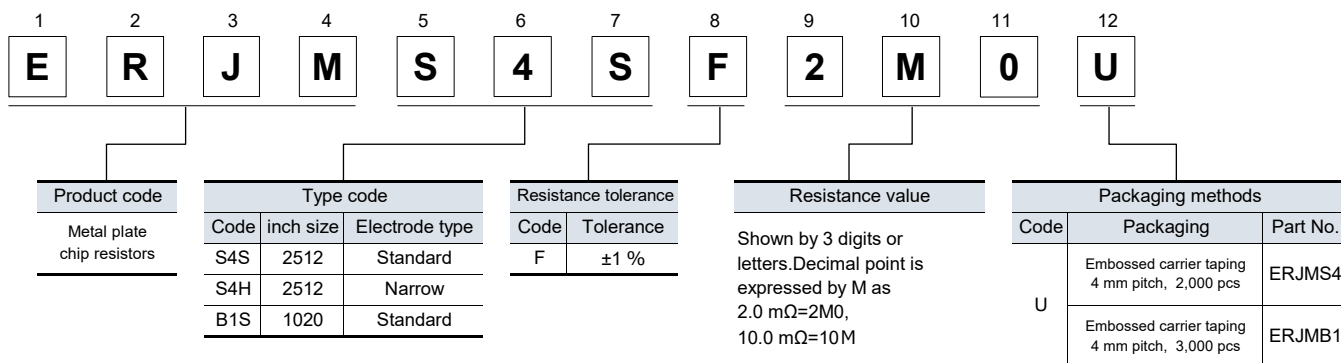

Features

- Ideal for current sensing solution
- Small case size with high power
- Metal plate bonding technology. Excellent long term stability
- Outer Resin with high heat dissipation. Wide temperature range (-65 °C to +170 °C)
- AEC-Q200 compliant
- RoHS compliant
- ISO9001, ISO/TS16949 certified

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

Ratings

Part No. (inch size)	Power rating (70 °C) (W)	Resistance range (mΩ)	Resistance tolerance (%)	T.C.R. (×10 ⁻⁶ /K)	Category temperature range (°C)	Terminal temp. upper limit (°C)	AEC-Q200 Grade

* Please contact us when resistors of irregular series are needed.

Power derating curve

If the terminal temperature of the resistor is more than terminal temperature upper limit value of the rated table, please reduce the rated power according to the Power Derating Curve shown in the figure on the right.

<Supplemented>

In the case of the temperature measurement of the terminal portion of the resistor, Please perform under the following conditions.

- 1) Terminal temperature measurement, please apply the temperature of the higher of either the left or right electrode upper surface of the resistor.
- 2) Please measure the temperature of the resistor in the land pattern printed of circuit board and plan to use by real conditions.

High Power Chip Resistors (Wide Terminal Type)

ERJ A, B type

ERJ A1, B1, B2, B3 series

Features

- High solder-joint reliability by wide terminal construction
- Excellent heat dissipation characteristics by wide terminal construction
- AEC-Q200 compliant
- RoHS compliant

Recommended applications

- Automotive electronic circuits including ECUs (Electrical control unit), anti-lock breaking systems and air-bag systems.
- Current sensing for power supply circuits in a variety of equipment.

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

*1: Use it on the condition that the case temperature is below the upper category temperature.

*2: If there is a doubt whether the rated ambient temperature or the rated terminal part temperature is used, give priority to the rated terminal part temperature.

*3: Rated Continuous Working Voltage (RCWV) shall be determined from $RCWV = \sqrt{\text{Power Rating} \times \text{Resistance Value}}$, or Limiting Element Voltage listed above, whichever less.

*4: Overload Test Voltage (OTV) shall be determined from $OTV = \text{Specified Magnification (refer to performance)} \times RCWV$ or Maximum Overload Voltage listed above, whichever less.

Ratings

Power derating curve

- For resistors operated in ambient rated ambient temperature, power rating shall be derated in accordance with the figure below.
In addition, please use under the condition that the product temperature is below the upper category temperature.

- For resistors operated in ambient rated terminal part temperature, power rating shall be derated in accordance with the figure below.
In addition, please use under the condition that the product temperature is below the upper category temperature.

Low TCR High Power Chip Resistors (Wide Terminal Type)

ERJ D type

ERJ D1, D2 series

Features

- Achieved High power and low TCR ($\pm 100 \times 10^{-6}/K$) using wide terminal electrode structure and original material
- Suitable for small size/high power current detection (Low TCR enables high accuracy of current detection)
- High solder-joint reliability by wide terminal construction
- Excellent heat dissipation characteristics by wide terminal construction
- AEC-Q200 compliant
- RoHS compliant

Recommended applications

- Automotive electronic circuits including ECUs (Electrical control unit), anti-lock breaking systems and air-bag systems.
- Current sensing for power supply circuits in a variety of equipment.
 - As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Anti-Surge Thick Film Chip Resistors

ERJ P, PA,PM type

ERJ PA2, PA3, P03, P06, P08, PM8, P14 series

Features

- ESD surge characteristics superior to standard metal film resistors
- High reliability : Metal glaze thick film resistive element and three layers of electrodes
- Suitable for both reflow and flow soldering
- High power
 - 0.20 W : 0603 inch / 1608 mm size (ERJP03)
 - 0.20 W : 0402 inch / 1005 mm size (ERJPA2)
 - 0.33 W : 0603 inch / 1608 mm size (ERJPA3)
 - 0.50 W : 0805 inch / 2012 mm size (ERJP06), 1210 inch / 3225 mm size (ERJP14)
 - 0.66 W : 1206 inch / 3216 mm size (ERJP08)
- High precision, High voltage, High resistance value (ERJPM8)
 - : Limiting element voltage 500 V, Resistance tolerance $\pm 1\%$, TCR ± 100 ($\times 10^{-6}$ / K)
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

*1: Use it on the condition that the case temperature is below the upper category temperature.

*2: If there is a doubt whether the rated ambient temperature or the rated terminal part temperature is used, give priority to the rated terminal part temperature.

*3: Rated Continuous Working Voltage (RCWV) shall be determined from $RCWV = \sqrt{\text{Power Rating} \times \text{Resistance Value}}$, or Limiting Element Voltage listed above, whichever less.

*4: Overload Test Voltage (OTV) shall be determined from $OTV = \text{Specified Magnification (refer to performance)} \times RCWV$ or Maximum Overload Voltage listed above, whichever less.

Ratings

Power derating curve

- For resistors operated in ambient rated ambient temperature, power rating shall be derated in accordance with the figure below.

In addition, please use under the condition that the product temperature is below the upper category temperature.

※ When the temperature of ERJP14 is 155 °C or less, the derating start temperature can be changed to 125 °C. (See the dotted line)

- For resistors operated in ambient rated terminal part temperature, power rating shall be derated in accordance with the figure below.

In addition, please use under the condition that the product temperature is below the upper category temperature.

 This series is not a recommended product.
Not recommended for new design.

Anti-Surge Thick Film Chip Resistors (Double-sided resistive elements structure)

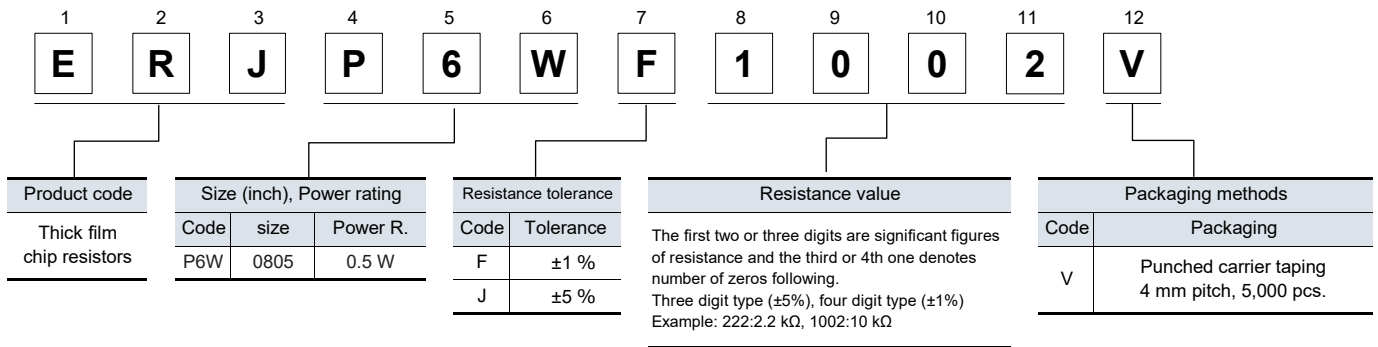

ERJ P□W type
ERJ P6W series

Features

- ESD surge characteristics superior to standard metal film resistors
 - Metal glaze thick film resistive element and three layers of electrodes
 - Suitable for both reflow and flow soldering
 - High power : 0.50 W, 2012(0805) size(ERJP6W)
 - High pulse characteristics : 1.5 times higher than 0805 inch size Anti-Surge thick film chip resistors (ERJP06)
 - Reference standards : IEC 60115-8, JIS C 5201-8, EIAJ RC-2134B
 - RoHS compliant
- As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

Construction

*1: Use it on the condition that the case temperature is below 155 °C.

*2: Overload (Short-time Overload) test voltage (SOTV) shall be determined from SOTV=2.5 × Power rating or max. Over load voltage listed above whichever less.

*3: Rated Continuous Working Voltage (RCWV) shall be determined from RCWV= $\sqrt{\text{Power Rating} \times \text{Resistance Values}}$, or Limiting Element Voltage listed above, whichever less.

Power derating curve

For resistors operated in ambient temperatures above 70 °C, power rating shall be derated in accordance with the figure below.

ESD Characteristic

Anti-Pulse Thick Film Chip Resistors

ERJ T type

ERJ T06, T08, T14 series

ERJ T14L series

Features

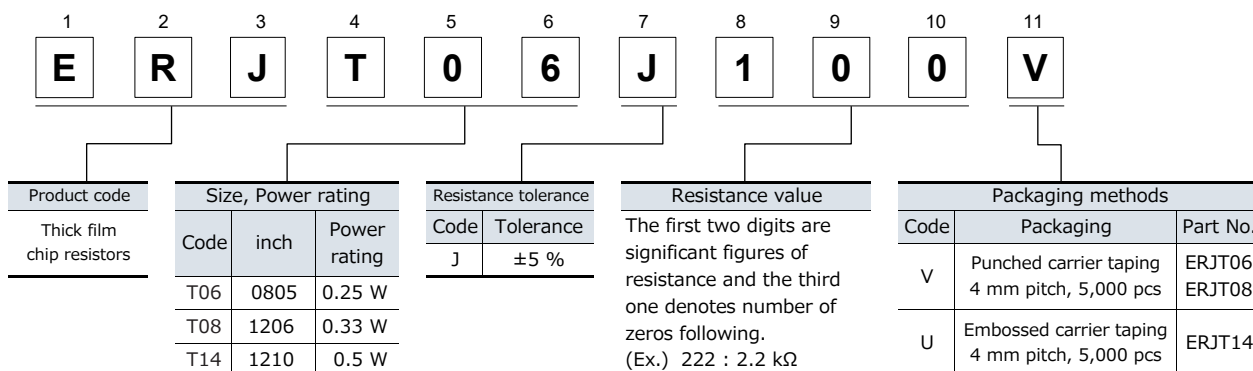

- Anti-Pulse characteristics
High pulse characteristics achieved by the optimized trimming specifications (ERJT06, T08, T14)
- Further high pulse characteristics achieved by trimming-less specifications (ERJT14L)
- High reliability : Metal glaze thick film resistive element and three layers of electrodes
- Suitable for both reflow and flow soldering
- High power
0.25 W : 0805 inch /2012 mm size(ERJT06)
0.33 W : 1206 inch /3216 mm size(ERJT08)
0.50 W : 1210 inch /3225 mm size(ERJT14, ERJT14L)
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

■ **As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.**

Anti-Sulfurated Thick Film Chip Resistors

ERJ S type (Au-based inner electrode type)

ERJ S02, S03, S06, S08, S14 series

ERJ S12, S1D, S1T series

ERJ U type (Ag-Pd-based inner electrode type)

ERJ U0X, U01, U02, U03, U06, U08, U14 series

ERJ U12, U1D, U1T, U6S, U6Q series

Features

- High resistance to sulfurization achieved by adopting an Au-based inner electrode (Series ERJS) and Ag-Pd-based inner electrode (Series ERJU)
- High reliability : Metal glaze thick film resistive element and three layers of electrodes
- Suitable for both reflow and flow soldering
- Low resistance type : ERJU6S, U6Q series : 0.1 Ω to 1 Ω
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant (except ERJU0X, ERJU01)
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

Anti-Sulfurated Thick Film Chip Resistors (Precision Type)

ERJ U□R type (Ag-Pd-based inner electrode type)

ERJ U2R, U3R, U6R series

Features

- High resistance to sulfurization achieved by adopting an Ag-Pd-based inner electrode.
- High precision : Resistance tolerance : $\pm 0.5\%$, TCR : $\pm 50 \times 10^{-6}/K$
- High reliability : Metal glaze thick film resistive element and three layers of electrodes.
- Suitable for both reflow and flow soldering.
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

● ERJU2R, U3R, U6R series

Ratings

Part No. (inch size)	Power rating* ¹ (70 °C) (W)	Limiting element voltage* ² (V)	Maximum overload voltage* ³ (V)	Resistance tolerance (%)	Resistance range (Ω)	T.C.R. ($\times 10^{-6}/K$)	Category temperature range (°C)	AEC-Q200 Grade
ERJU2R (0402)	0.1	50	100	± 0.5	100 to 100 k (E24, E96)	± 50	-55 to +155	Grade 0

Performance

Test Item	Performance requirements ΔR	Test conditions
Resistance	Within specified tolerance	20 °C
T. C. R.	Within specified T. C. R.	+25 °C / +155 °C
Overload	±2 %	Rated voltage × 2.5, 5 s
Resistance to soldering heat	±1 %	270 °C, 10 s
Rapid change of temperature	±1 %	-55 °C (30 min.) / +155 °C (30 min.), 100 cycles
High temperature exposure	±1 %	+155 °C, 1000 h
Damp heat, Steady state	±1 %	60 °C, 90 % to 95 %RH, 1000 h
Load life in humidity	±2 %	60 °C, 90 % to 95 %RH, Rated voltage, 1.5 h ON / 0.5 h OFF cycle, 1000 h
Endurance at 70 °C	±2 %	70 °C, Rated voltage, 1.5 h ON / 0.5 h OFF cycle, 1000 h

Anti-Sulfurated Thick Film Chip Resistors (Anti-Surge Type)

ERJ UP type

ERJ UP3, UP6, UP8 series

Features

- High resistance to sulfurization achieved by adopting Anti-Sulfurated electrode material (Ag-Pd-based inner electrode) and structure
- ESD surge characteristics superior to standard metal film resistors
- High reliability : Metal glaze thick film resistive element and three layers of electrodes
- Suitable for both reflow and flow soldering
- High power
 - 0.25 W : 0603 inch / 1608 mm size (ERJUP3)
 - 0.50 W : 0805 inch / 2012 mm size (ERJUP6)
 - 0.66 W : 1206 inch / 3216 mm size (ERJUP8)
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

Ratings

Part No. (inch size)	Power rating*1 (70 °C) (W)	Limiting element voltage*2 (V)	Maximum overload voltage*3 (V)	Resistance tolerance (%)	Resistance range (Ω)	T.C.R. (×10 ⁻⁶ /K)	Category temperature range (°C)	AEC-Q200 Grade
ERJUP3 (0603)	0.25	150	200	±0.5, ±1	10 to 1 M (E24, E96)	±100	-55 to +155	Grade 0
				±5	1 to 1.5 M (E24)	±200		
ERJUP6 (0805)	0.50	400	600	±0.5, ±1	10 to 1 M (E24, E96)	±100		
				±5	1 to 3.3 M (E24)	R<10 Ω : -100 to +600 10 Ω≤R : ±200		
ERJUP8 (1206)	0.66	500	1000	±0.5, ±1	10 to 1 M (E24, E96)	±100		
				±5	1 to 10 M (E24)	R<10 Ω : -100 to +600 10 Ω≤R : ±200		

*1: Use it on the condition that the case temperature is below the upper category temperature.

*2: Rated Continuous Working Voltage (RCWV) shall be determined from $RCWV = \sqrt{\text{Power Rating} \times \text{Resistance Value}}$, or Limiting Element Voltage listed above, whichever less.

*3: Overload Test Voltage (OTV) shall be determined from $OTV = \text{Specified Magnification (refer to performance)} \times RCWV$ or Maximum Overload Voltage listed above, whichever less.

Anti-Sulfurated High Power Chip Resistors (Wide Terminal Type)

ERJ C type

ERJ C1 series

Features

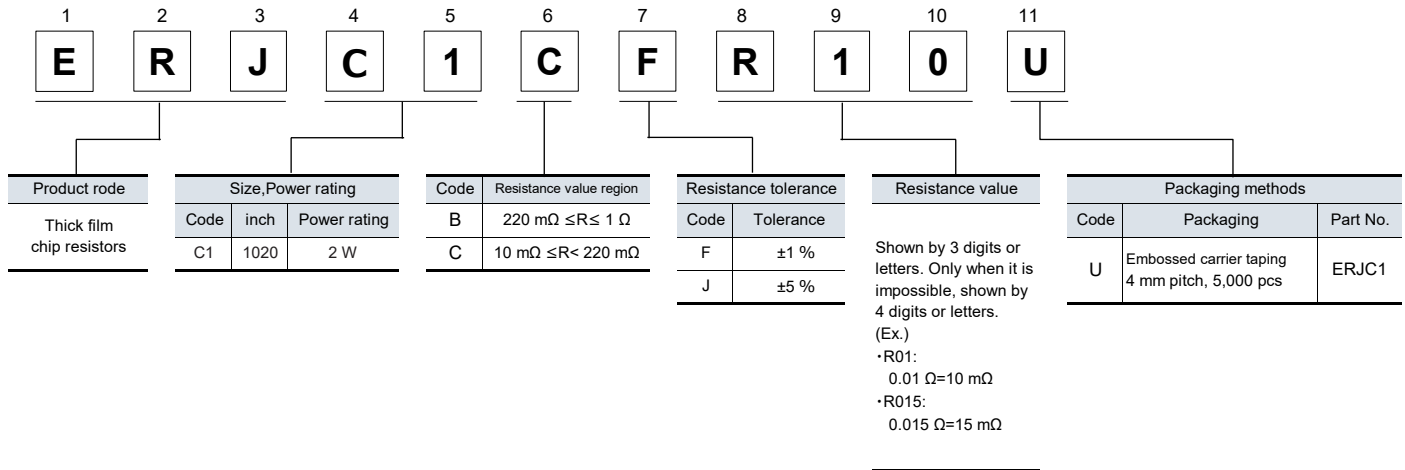

- High resistance to sulfurization achieved by adopting Anti-Sulfurated electrode material (Ag-Pd-based inner electrode) and structure (Covered electrode)
- High solder-joint reliability by wide terminal construction
- Excellent heat dissipation characteristics by wide terminal construction
- AEC-Q200 compliant
- RoHS compliant

Recommended applications

- Motor control circuit of the industrial equipment
 - Automotive electronic circuits including ECUs (Electrical control unit), anti-lock breaking systems and air-bag systems
 - Current sensing for power supply circuits in a variety of equipment
- As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

High Temperature Thick Film Chip Resistor (Automotive Grade)

ERJH type

ERJ H2G, H2C, H2R, H3G series

ERJ H3E, H3Q, H6G, HP6 series

Features

- High reliability : Metal glaze thick film resistive element and high temperature of electrodes structure
- Achieve maximum category temperature 175 °C and rated category temperature 105 °C
- Compatible with placement machines : Taping packaging available
- Suitable for both reflow and flow soldering
- Reference standard : IEC 60115-8, JIS C 5201-8, JEITA RC-2134C
- AEC-Q200 compliant
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Chip Resistors Array

EXB type

EXB 14V, 18V, 24V, 28V, N8V, 2HV, series

EXB 34V, V4V, 38V, V8V, S8V series

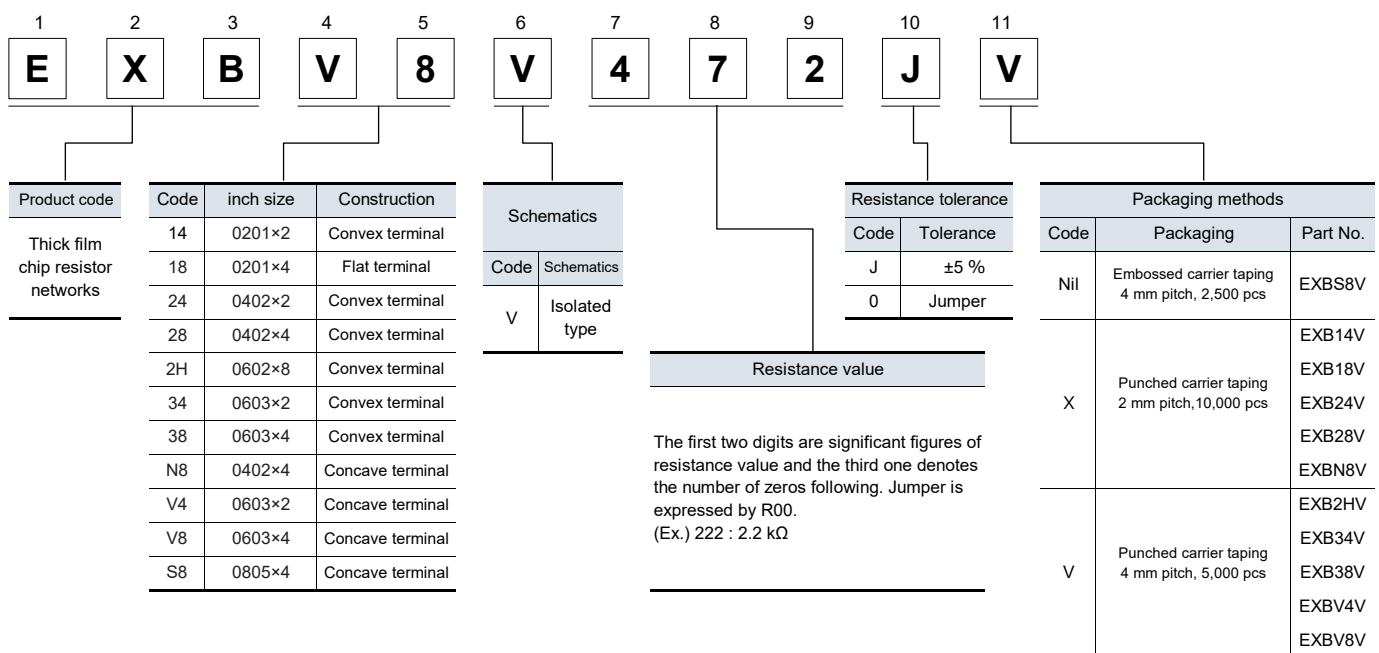

Features

- High density
2 resistors in 0.8 mm × 0.6 mm size / 0302 inch size : EXB14V
4 resistors in 1.4 mm × 0.6 mm size / 0502 inch size : EXB18V
2 resistors in 1.0 mm × 1.0 mm size / 0404 inch size : EXB24V
4 resistors in 2.0 mm × 1.0 mm size / 0804 inch size : EXB28V, N8V
8 resistors in 3.8 mm × 1.6 mm size / 1506 inch size : EXB2HV
2 resistors in 1.6 mm × 1.6 mm size / 0606 inch size : EXB34V, V4V
4 resistors in 3.2 mm × 1.6 mm size / 1206 inch size : EXB38V, V8V
4 resistors in 5.1 mm × 2.2 mm size / 2009 inch size : EXBS8V
- Improvement of placement efficiency
Placement efficiency of Chip Resistor Array is two, four or eight times of the flat type chip resistor
- Reference Standard : IEC 60115-9, JIS C 5201-9, EIAJ RC-2129
- AEC-Q200 compliant (EXB2, EXB3)
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Resistance to soldering heat	±1 %	270 °C, 10 s
Rapid change of temperature	±1 %	-55 °C (30 min.) / +155 °C (30 min.), 100 cycles
High temperature exposure	±1 %	+125 °C, 1000 h
Damp heat, Steady state	±1 %	60 °C, 90 % to 95 %RH, 1000 h
Load life in humidity	±3 %	60 °C, 90 % to 95 %RH, Rated voltage (Jumper type : Rated current), 1.5 h ON / 0.5 h OFF cycle, 1000 h
Endurance at 70 °C	±3 %	70 °C, Rated voltage (Jumper type : Rated current), 1.5 h ON / 0.5 h OFF cycle, 1000 h

Anti-Sulfurated Chip Resistors Array

EXB type

EXB 14V, 18V, 24V, 28V, N8V, 2HV series

EXB 34V, V4V, 38V, V8V, S8V series

Features

- High resistance to sulfurization achieved by adopting an Ag-Pd-based inner electrode
- High density
 - 2 resistors in 0.8 mm × 0.6 mm size / 0302 inch size : EXBU14
 - 4 resistors in 1.4 mm × 0.6 mm size / 0502 inch size : EXBU18
 - 2 resistors in 1.0 mm × 1.0 mm size / 0404 inch size : EXBU24
 - 4 resistors in 2.0 mm × 1.0 mm size / 0804 inch size : EXBU28
 - 8 resistors in 3.8 mm × 1.6 mm size / 1506 inch size : EXBU2H
 - 2 resistors in 1.6 mm × 1.6 mm size / 0606 inch size : EXBU34
 - 4 resistors in 3.2 mm × 1.6 mm size / 1206 inch size : EXBU38
- Improvement of placement efficiency
Placement efficiency of chip resistor array is two, four or eight times of the flat type chip resistor
- Reference standard : IEC 60115-9, JIS C 5201-9, EIAJ RC-2129
- AEC-Q200 compliant (EXBU2, EXBU3)
- RoHS compliant

■ As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

1	2	3	4	5	6	7	8	9	10	11

Chip Resistors Networks

EXB type

EXB D, E, A, Q series

Features

- High density placing for digital signal circuits
 - Bussed 8 or 15 resistors for pull up/down circuits
 - EXBD : 3.2 mm × 1.6 mm × 0.55 mm, 0.635 mm pitch
 - EXBE : 4.0 mm × 2.1 mm × 0.55 mm, 0.8 mm pitch
 - EXBA : 6.4 mm × 3.1 mm × 0.55 mm, 1.27 mm pitch
 - EXBQ : 3.8 mm × 1.6 mm × 0.45 mm, 0.5 mm pitch
 - Available direct placing on the bus line by means of half pitch spacing without through-holes on PWB ("High density placing" is shown below)
- High speed mounting using conventional placing machine
- Reference Standard : IEC 60115-9, JIS C 5201-9, EIAJ RC-2130
- RoHS compliant

Chip Attenuator

EXB type

EXB 14AT, 24AT series

Features

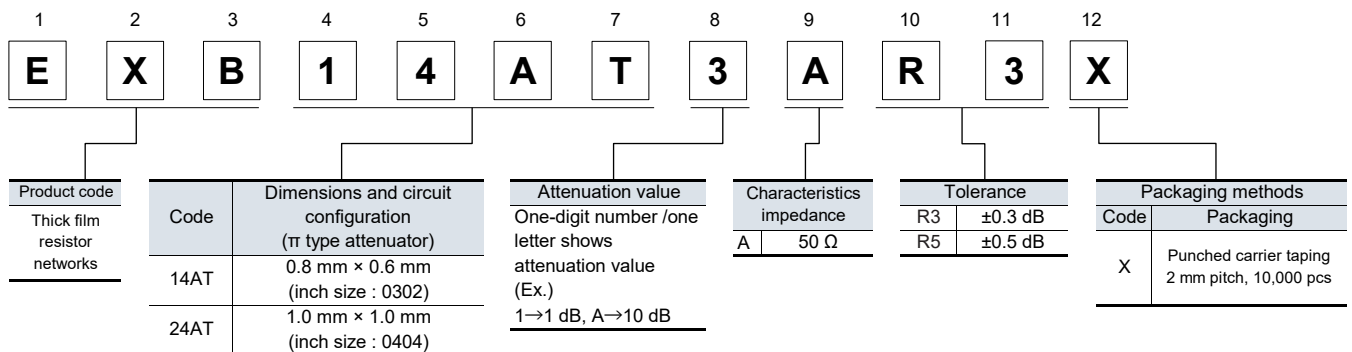

- Unbalanced π type attenuator circuit in one chip
EXB14AT (0.8 mm×0.6 mm) , EXB24AT (1.0 mm×1.0 mm)
- Reduced mounting area
EXB14AT : About 60 % smaller than the area of an attenuator circuit consisting of three 0603 chip resistors, almost equal to the area of three 0402 chip resistors
EXB24AT : About 50 % smaller than the area of an attenuator circuit consisting of three 1005 chip resistors, almost equal to the area of three 0603 chip resistors
- Mounting cost reduction : (Only 1 chip placed as compared to 3)
- Attenuation : 1 dB to 10 dB
- RoHS compliant

Recommended applications

- Attenuation / level control / impedance matching of high frequency
(communication signalling equipment cellular phones(GSM, CDMA, PDC, etc.), PHS, PDAs)
- As for packaging methods, land pattern, soldering conditions and safety precautions, please see data files.

Explanation of part numbers

Note : Please check the "Ratings" for the presence/absence of part numbers for combinations of the symbols below.

Ratings

Part No.	EXB14AT, EXB24AT
Attenuation value	1 dB, 2 dB, 3 dB, 4 dB, 5 dB, 6 dB, 10 dB*
Attenuation value tolerance	1 dB, 2 dB, 3 dB, 4 dB, 5dB : ± 0.3 dB 6 dB, 10 dB : ± 0.5 dB
Characteristic impedance	50 Ω
Power rating at 70 °C	0.04 W / package
Frequency range	DC to 3.0 GHz
VSWR (Voltage standing wave ratio)	1.3 max.
Number of resistors	3 resistors
Number of terminals	4 terminals
Category temperature range	-55 °C to +125 °C

* Please inquire about the other Attenuator value

Power derating curve

For resistors operated in ambient temperatures above 70 °C, power rating shall be derated in accordance with the figure on the right.

Recommended land pattern

● An example of a land pattern for Chip Resistor Networks is shown below.

	EXBA	EXBE
For popular pattern	<p>Pitch 1.27 mm</p>	<p>Pitch 0.8 mm</p>
For high density pattern*	<p>Pitch 0.635 mm Through-hole less</p> <p>EXBA10P EXBA10E</p>	<p>Pitch 0.8 mm Through-hole less</p>
For popular pattern	<p>Pitch 0.635 mm</p>	<p>Pitch 0.5 mm</p>

* When designing high density land patterns, examine the reliability of isolation among the lines and adopt the chip resistor networks.

Recommended soldering conditions (Rectangular type)

Recommendations and precautions are described below.

● **Recommended soldering conditions for reflow**

- Reflow soldering shall be performed a maximum of two times.
- Please contact us for additional information when used in conditions other than those specified.
- Please measure the temperature of the terminals and study every kind of solder and printed circuit board for solderability before actual use.

For soldering (Example : Sn/Pb)

	Temperature	Time
Preheating	140 °C to 160 °C	60 s to 120 s
Main heating	Above 200 °C	30 s to 40 s
Peak	235 ± 5 °C	max. 10 s

For lead-free soldering (Example : Sn/Ag/Cu)

	Temperature	Time
Preheating	150 °C to 180 °C	60 s to 120 s
Main heating	Above 230 °C	30 s to 40 s
Peak	max. 260 °C	max. 10 s

● **Recommended soldering conditions for flow**

	For soldering		For lead-free soldering	
	Temperature	Time	Temperature	Time
Preheating	140 °C to 160 °C	60 s to 120 s	150 °C to 180 °C	60 s to 120 s
Soldering	245 ± 5 °C	20 s to 30 s	max. 260 °C	max. 10 s

Recommended soldering conditions (Chip resistor array / networks and Chip attenuator)

Recommendations and precautions are described below.

● **Recommended soldering conditions for reflow**

- Reflow soldering shall be performed a maximum of two times.
- Please contact us for additional information when used in conditions other than those specified.
- Please measure the temperature of the terminals and study every kind of solder and printed circuit board for solderability before actual use.

For soldering (Example : Sn/Pb)

	Temperature	Time
Preheating	140 °C to 160 °C	60 s to 120 s
Main heating	Above 200 °C	30 s to 40 s
Peak	235 ± 5 °C	max. 10 s

For lead-free soldering (Example : Sn/Ag/Cu)

	Temperature	Time
Preheating	150 °C to 180 °C	60 s to 120 s
Main heating	Above 230 °C	30 s to 40 s
Peak	max. 260 °C	max. 10 s

● **Flow soldering**

We do not recommend flow soldering, because a solder bridge may form. Please contact us regarding flow soldering of EXBA series.

Standard for resistance value and resistance tolerance

Basis standard

IEC Publication 60062 : Marking codes for resistors and capacitors.

IEC Publication 60063 : Preferred number series for resistors and capacitors.

JIS C 5062 : Marking codes for resistors and capacitors.

JIS C 5063 : Preferred number series for resistors and capacitors.

Resistance values

The resistance values are notched by "Ratio" below in each series.

Series	Resistance tolerance (Standard)	Ratio	Remarks
E6	±20 %	$\sqrt[6]{10}=1.46$	Please refer to standard resistance values shown on this catalog.
E12	±10 %	$\sqrt[12]{10}=1.21$	
E24	± 5 %	$\sqrt[24]{10}=1.10$	
E48	± 2 %	$\sqrt[48]{10}=1.05$	
E96	± 1 %	$\sqrt[96]{10}=1.02$	

How to express the resistance value with a Panasonic part number

The resistance value expressed in ohms is identified by a three digit number or a four digit number.

The last digit specifies the number of zeroes to follow.

The letter "R" shall be used as the decimal point for less than 10 Ω.

The examples of a three digit number

Resistance code	Value in ohms (Ω)
R56	0.56
5R6	5.6
100	10
271	270
102	1 k
273	27 k
104	100 k
275	2.7 M
106	10 M
107	100 M

The examples of a four digit number

Resistance code	Value in ohms (Ω)
R562	0.562
5R62	5.62
56R2	56.2
1000	100
2711	2.71 k
1002	10 k
2713	271 k
1004	1 M
2751	2.71 M
1006	100 M

How to express the resistance tolerance with a Panasonic part number

The resistance tolerance is identified by a single letter in accordance with the following table and the code is placed just before the resistance code in the following examples.

Tolerance code	Tolerance (%)	Examples
W	± 0.05	W1001 : 1000 Ω ± 0.05 %
B	± 0.1	B1001 : 1000 Ω ± 0.1 %
C	± 0.25	C1001 : 1000 Ω ± 0.25 %
D	± 0.5	D1001 : 1000 Ω ± 0.5 %
F	± 1	F1001 : 1000 Ω ± 1 %
G	± 2	G1001 : 1000 Ω ± 2 %
J	± 5	J101 : 100 Ω ± 5 %
K	± 10	K101 : 100 Ω ± 10 %
M	± 20	M101 : 100 Ω ± 20 %
